INSTALL TIME

PROFESSIONAL: 60 MINUTES

NOVICE (DIY): 120 MINUTES

INSTALL NOTES:

- REMOVE EXHAUST
- HOLE ENLARGEMENT REQUIRED
- SILICONE SEAL HARDWARE

INSTALLATION STEPS

1. Temporarily remove the muffler and attached exhaust pipes from the vehicle. Only the muffler system from the attaching flange rearward needs to be removed. Removing the muffler includes disconnecting the pipe flange, disconnect bracket near the flange, and remove (2) exhaust hanger plates on each side of the vehicle above the muffler.
2. There are hanger plates that are connected to the vehicle's floor with (4) weldnuts per side. These weldnuts can be located from inside the trunk by temporarily pulling away the carpet and floor panels in the trunk until the nuts are accessible. Weldnuts need to be removed and the holes enlarged to accept 7/16" hardware. The (4) holes in each exhaust plate also need to be enlarged to accept 7/16" hardware.
3. Position the hitch against the underside of the vehicle floor as shown, with the hitch behind the rear panel. Support the muffler and hanger plates below the hitch side plates. Install hardware as shown with the (4) CM-11713-BP reinforcement plates inside the vehicle, opposite the hitch.
4. Torque all 7/16" fasteners to 70 lb-ft.
5. Reconnect exhaust bracket and flange.
6. Use silicone sealant to seal hardware installed through vehicle floor.

PERIODICALLY CHECK THIS RECEIVER HITCH TO ENSURE THAT ALL FASTENERS ARE TIGHT AND THAT ALL STRUCTURAL COMPONENTS ARE SOUND.
