Installation Instructions for Model 2030 Console Safe

The Lock'er Down Model 2030 goes in the console of a 2017 up Honda Ridgeline.

- It is a good idea to set the combination before you install the safe, and do it with the door open.
- Clear the contents out of the compartment.
- Move the sliding tray toward the center of the console and firmly pull up to remove it.
- Slide the two tray holders to the rear of the console.
- Remove the two bolts in the bottom of the compartment that hold the console to the floor.
- Place the bottom/side portion of the safe in the bottom of the console lining up the bolt holes with those in the console. Take the two included longer bolts and attach to the floor, but don't tighten at this time.
- Take the top assembly and slide it in from the front, pick up on the back of and push forward it to allow the front two pin studs in the top plate to go into the front slots of the bottom assembly. Then push down on the rear to push the rear pin studs through the rear holes. Take the 4 included acorn nuts and bolt the two sections together.
- Tighten the bolts in the bottom.
- Reattach the tray to the sliding rails, and you should be done.
